Figure 1 is a block diagram of a packet processing system. The system includes a packet input order arrow, a packet input direction arrow, a memory arbitrator (404), a header processing unit (408), and a saving order arrow. The memory arbitrator (404) receives packets (1002, 1004, 1006, 1008) and outputs them to memory (1002b, 1004b, 1006b, 1008b). The header processing unit (408) processes the headers (1002a, 1004a, 1006a, 1008a) and outputs them to memory (1002a, 1004a, 1006a, 1008a). The saving order arrow indicates the sequence of saving the packets and headers.
